

The age of a donkey can be estimated by looking at the incisor (front) teeth. Up to the age of 10, reasonable accuracy can be obtained. However, after 10 years can be more difficult and therefore less accurate. We would always recommend taking an experienced person with you i.e. an equine vet, to check a donkey's teeth before purchase.

Incisor Eruption Times

Central Incisors	Deciduous (baby teeth)	0-1 week	Permanent (adult teeth)	2.5 years approx.
Lateral incisors	Deciduous (baby teeth)	2-4 weeks	Permanent (adult teeth)	3.5 years approx.
Corner Incisors	Deciduous (baby teeth)	7-9 months	Permanent (adult teeth)	4.5 years approx.
